INSTRUCTIONS: Four parameters can be adjusted with the **AMP**. After selecting the preset above, use the chart below to track all changes in settings. Circle each change in the appropriate box. Each parameter can be adjusted higher (+) or lower (-) from current setting. For example, if the first adjustment made is to increase output on the right, on row 1, circle the R in the + column for the 4th parameter (Output). For binaural changes, circle both R and L for each adjustment.
