INTRODUCTION

The Muse iQ family welcomes our first lithium-ion RIC rechargeable system, the Muse iQ Rechargeable and Synergy Charger, as well as our most powerful Muse iQ device, the new Power Plus BTE 13. The Muse iQ family accommodates the needs of all patients, from power users to those who prefer the ease of a rechargeable system. The new Muse iQ hearing aids are supported by an update to Inspire, allowing for new user control options that align with the Muse iQ R and Power Plus BTE 13 compatibility.

MUSE iQ RECHARGEABLE

We’ve reimagined rechargeable with our best-in-class lithium-ion solution, Muse iQ Rechargeable. Now the smallest rechargeable RIC, lasts 20 percent longer, is 30 percent smaller than other systems and is 100 percent easy to use. Highlights of this innovative, new hearing aid are detailed below.

- Fastest charging to provide a full day of use
- All-in-one charger lets patients grab their hearing aids and go
- Charging case includes a 3-day (“weekend”) charge without a separate battery pack
- Desiccant puck for dehumidification included with charger

The Muse iQ R is offered in multiple wireless technology tiers. Supporting Multiflex Tinnitus Technology and compatible with SurfLink accessories, Muse iQ R is also the first rechargeable CROS system available for patients with single-sided hearing loss. With enough battery capacity (30+ hours) to get through any day, your patients no longer need to worry about changing batteries or losing power during their busy daily lives. They can simply charge the hearing aids, along with their other electronic devices, every night. Muse iQ R also provides the ability to quick charge. With just 15 minutes of charging patients receive 2.5 hours of use when needed.

AMY S. REILLY, Au.D.
The industrial design uses the patient-preferred rocker switch that maintains its core functionality, while also allowing for a manual on/off, if needed. Patients will benefit greatly from the Muse iQ R’s automatic on/off behavior when inserting and removing the devices from the charger. For easy “grab and go” use, the patient is not required to manually power the hearing aid on/off.

THE SYNERGY CHARGER

The Synergy Charger is designed with the patient in mind. It is simple, efficient and small.

The Synergy Charger is simple - plugged in or on the go, it is ready to charge the Muse iQ Rechargeable hearing aids. As soon as the Muse iQ R is inserted, it will power off and begin to charge. When the Muse iQ R is removed from the charger, it will automatically power on. It’s ready to go!

The Synergy Charger is efficient – your patient will achieve a full day’s charge in just two hours, and a full battery in 3.5 hours of charging. The Synergy Charger includes an on-board battery that can supply up to three days of hearing aid charge when on the go. Charging the hearing aids with the micro USB cord plugged in will charge the Synergy Charger’s on-board battery and the hearing aids simultaneously.

The Synergy Charger is small — finding space on a dresser or in a suitcase will not be a problem. Your entire Muse iQ R system fits in the palm of your hand!

The Synergy Charger’s intuitive design features will allow patients to spend less time learning functionality and more time enjoying life.
MUSE iQ POWER PLUS BTE 13

Muse iQ introduces the smallest 80-gain BTE (140/80), which includes the complete iQ feature set, telecoil and patient-preferred rocker switch. All of the expected functionality of the Muse iQ product line, from Multiflex Tinnitus, to CROS/BiCROS, to compatibility with the SurfLink accessories is available in our newest power device.

The recognized industrial design was maintained with our newest release of Muse iQ Power Plus BTE 13. The flexibility you have grown to expect, including field replaceable microphone covers, for in-office maintenance and care, as well as the rocker switch, giving you ultimate control over the various user control options, is maintained. The newest 80 gain power product accomplishes all of this while also achieving an IP 68 rating and 7 to 10 days of battery life.

NEW INSPIRE INTERFACE:

With the introduction of our first, lithium-ion rechargeable device, various changes to Inspire and the hearing aid user controls were needed. After all, there is no longer a battery door to open and close to power the system on and off! Although the hearing aids will power on and off automatically when inserted and removed from the Synergy Charger, manual on/off functionality has been added to the rocker switch. This is the default setup when the hearing aids are shipped, but like all of our user control options, the configuration is flexible. In addition, there have been updates necessary for the Muse iQ Rechargeable specific to data logging, battery life, and the inclusion of a “Power Off” indicator.

With the introduction of the Muse iQ R and Power Plus BTE 13, all of your patients can benefit from proven Muse iQ technology, regardless of their degree of hearing loss or need for a long-lasting rechargeable system. No matter your preference for a RIC, BTE, or custom device, Muse iQ has your patients covered!
Say hello to the iQ difference

Built on our proven Synergy platform with Acuity OS 2, Muse iQ helps patients engage in life in a more personal way. With immersive experiences, enhanced sound quality, reliable technology and improved patient satisfaction, Muse iQ is even better — offering more ways to increase overall acceptance, personalization, convenience and confidence.
