Starkey® Livio® products are designed to minimize hearing aid system noise and ensure that listening in quiet is comfortable and unobtrusive.

Hearing Reality™ technology applies fast-acting noise reduction developed to address the system noise that all hearing aids generate, but can only be heard in very quiet environments when not adequately suppressed.

Hearing Reality helps ensure that unwanted soft sounds can fade into the background where they belong.

When compared to premium receiver-in-canal hearing aids from three leading developers, Starkey Livio products offered the lowest measurable system noise (Figure 1).

In blind comparisons, 10 of 10 normal hearing expert listeners ranked Starkey Livio products first in sound quality when listening in a quiet environment (Figure 2).

*Results from Starkey Hearing Technologies internal clinical studies.*
